THE **REF**OCUS DIFFERENCE

At the core of the **REFocus** program, we believe that purposeful movement is often overlooked in the attempt to meet academic criteria. For success in the classroom we must refocus our efforts to address missing skills that are the foundation for academic, behavioral, and social success.

Our program provides training, student assessment, useable data for teachers and administrators, year-round activity calendar, school/classroom support, reading support, and professional development support.

TRAINING & ASSESSMENT

On-site training is delivered, in person, by **REF** consultants. The two-day training is devoted to developing a fundamental understanding of how to meet the needs of at-risk students before they filter into the special education pipeline. Attendees learn the importance of basic physical skills and how these skills impact learning, behavior, and social interaction.

All students from the youngest through 3rd grade are evaluated using a standardized instrument, adapted to meet the needs of the **REFocus** program, providing pre- and post-testing for ongoing progress monitoring.

CALENDAR & SUPPORT

A year-round online calendar is available which includes activities that focus on a different skill set for each day of the week, including weekends. These inexpensive activities support both classroom and family!

Classroom support is available for a one-year period, and includes monthly on-site support including observations, evaluation results, email and phone support, and a quarterly newsletter.

BENEFITS

Research has shown that adding purposeful movement into the classroom and home is extremely beneficial for everyone and especially for young developing learners.

Adding purposeful movement will:

- improve behavior
- assist children who lag behind developmentally
- release stress & trauma
- lay groundwork for future demands of fine motor/cognitive skills
- develop social interaction/cooperation
- positively impact emotional growth
- increase imagination
- promote mental clarity
- boost problem solving skills
- advance cognitive processing
- elevate concentration
- raise test scores
- improve academic ability
